#### EVANGELISTIC SERVICES IN YORK CONG. CHURCH

Alvin L. Branch, of Three Rivers, Mich., is conducting a special evan-gelistic services in the York Congrega-tional church in Mallet Creek every evening this week at 7:30 and next Sunday morning and evening.

Mr. Branch lived for a number of years in York and attended the Me-dina schools for seven years and graduated from the Medina high school in 1895.

The meetings are entirely unde-nominational and everyone is hearti-ly invited to attend. Some special Bible studies will be given on the second coming of Christ.

#### MINERAL REQUIREMENTS OF SWINE

Studies made by the Department of Nutrition at the Ohio Experiment Station, show that all grain rations for growing swine require mineral supplements. The breaking down of swine, and the development of rickety symptoms, lameness and paralysis

have been found to result from in-sufficient mineral nutriment.

Rations containing sufficient milk or tannage, or leguminous roughage, however, do not require mineral sup-plements. When swine are fed on cereal rations there is urgent need for the element calcium, and possible need for phosphorus, in addition. These may be efficiently supplied by a half and half mixture of precipi-tated calcium carbonate and precipi-tated bone flour. Other less efficient carbonates and phosphates are avail-able.

Mixing the mineral nutrients with the ration and allowing free access to mineral supplements as well, will tend to increase the development of the skeleton with swine intended for breeding purposes. When swine are self fed there is a tendency to put on more flesh than skeleton to corres-pond unless mineral supplements are fed mixed with the grain.
